Exercise 3

1. The below image illustrates image binding.

   ```
   import { Component } from '@angular/core';

   @Component({

     selector: 'app-root',

     template: `   <h1>{{title}}</h1>

     <img src="{{imageUrl}}" />   ` })

   export class AppComponent {

     title = 'My First Angular App';

     imageUrl = " https://www.w3schools.com/html/pic_mountain.jpg";

   }
   ```

2. The below illustrates how we get Bootstrap in our app via the index.html .
   ```
   <link rel="stylesheet"
   href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css">
   ```
3. The below illustrates how can we link a click event of a button to a javascript function in the component.

   ```
   @Component({

   selector: 'app-root',

   template: ` <button (click)="onClickMe($event)">Submit</button> `

   })

   export class AppComponent{

   onClickMe($event){    console.log("Clicked",$event)
   ```

```
    }

}
```
